## Claims:

1. (original). A polyurethane composition for the production of foils, comprising the following components, at least some of which are stored separately:

 $\mathcal{L}_{i}$ 

- (A) a di- or polyisocyanate
- (B) a compound containing hydrogen active in a polyurethane reaction;
- (C) a catalyst or a system catalyzing the polyurethane reaction;
- (D) a fine-particle oxide of a metal or of a metalloid, as additive; at a concentration above 3% by weight
- (E) where appropriate, additives, in the absence of amine initiators.
- 2. (original) The polyurethane composition as claimed in claim 1, wherein, in component (A), use is made of an isocyanate in which the isocyanate groups have no direct bonding to an aromatic group, in particular aliphatic or alicyclic isocyanates or associated derivatives.
- (currently amended) The polyurethane composition as claimed in claim 1-or
  wherein the compound of component (B) containing active hydrogen has been selected from polyols, in particular having more than 60% of primary
  OH groups.
- 4. (currently amended) The polyurethane composition as claimed in any of claims 1 to 3claim 1, wherein component (A) has an average functionality of from 2 to 3 and an NCO content of from 8 to 25%, and component (B) has an average functionality of from 2 to 8.
- 5. (currently amended) The polyurethane composition as claimed in any of claims 1 to 4claim 1, which comprises, as catalyst, a lead catalyst, bismuth catalyst, titanium catalyst, or tin catalyst, or comprises a system in which the lead compounds, bismuth compounds, titanium, compounds, and/or tin compounds are present.
- 6. (currently amended) The polyurethane composition as claimed in any of elaims 1 to 5claim 1, which comprises traces of water, its amount being not more than 0.3 part, based on 100 parts of component (B).

7. (currently amended) The polyurethane composition as claimed in any of elaims 1 to 6claim 1, which also comprises an OH-terminated chain extender or crosslinking agent with a molecular weight below 1000 and with an average functionality of from 2 to 6.

4

- 8. (currently amended) The polyurethane composition as claimed in any of elaims 1 to 7claim 1, wherein the ratio between the components (A): (B-E) is from 15: 100 to 40: 100.
- 9. (currently amended) The polyurethane composition as claimed in any of elaims 1 to 8claim 1, wherein the proportion by weight of component (C) is from 0.03 to 5%.
- 10. (currently amended) The polyurethane composition as claimed in any of elaims 1 to 9claim 1, wherein the proportion by weight of component (D) is from 3 to 20%.
- 11. (currently amended) The polyurethane composition as claimed in any of claims 1 to 10claim 1, wherein a release agent for better demolding has also been added to the reaction mixture.
- 12. (currently amended) The polyurethane composition as claimed in any of claims 1 to 11 claim 1, wherein the fine-particle oxide is a fumed silicon dioxide, aluminum oxide, titanium oxide or is a mixture of these oxides, in particular also with relatively small amounts of other oxides of metals or of metalloids.
- 13. (original) The polyurethane composition as claimed in claim 12, wherein the fine-particle oxide is an oxide hydrophobicized at least on the surface, in particular hydrophobicized fumed silica.
- 14. (currently amended) A process for producing a foil from the polyurethane composition as claimed in any of claims 1 to 13claim 1, which comprises spraying the composition in one or more passes onto a smooth surface or into a mold, and permitting it to react to completion.
- 15. (original) The process as claimed in claim 14, wherein the manner of sprayapplication is such as to give a layer thickness of from 0.1 to 5 mm, preferably from 0.1 to 3 mm, more preferably from 0.1 to 2 mm.

16. (currently amended) The process as claimed in claim 14 or 15, wherein the composition is sprayed using a temperature of from 40 to 90°C

4.

- 17. (original) A polyurethane foil, which comprises a fine-particle oxide of a metal or of a metalloid, its proportion by weight preferably being from 5 to 15%.
- 18. (currently amended) The polyurethane foil as claimed in claim 17, which is obtainable from a polyurethane composition as claimed in any of claims 1 to 13.
